John F. Quinn, J.D., Ph.D., *Chairman* | Thomas A. Nies, *Executive Director*

MEMORANDUM

DATE: October 28, 2015
TO: Executive Committee
FROM: Tom Nies
SUBJECT: 2017 Council Priorities

1. The attached documents are to help the Executive Committee develop recommendations for 2017 Council priorities. I will update enclosure (1) for the Council meeting to reflect the Executive Committee recommendations.

- a. The first attachment lists identified possible tasks. Tasks are listed by FMP, with tasks that should be completed by the end of the year in the first column and multi-year tasks in the second column. Committee recommendations are identified with a checkmark. My advice for Executive Committee recommendations are marked with an “x”. Tasks that I do not recommend are also in italics. The list includes major staff tasks that are expected to occur. My recommendations assume that most multi-year tasks in progress will continue until completed, and that all regulatory requirements will be addressed.
- b. The second attachment summarizes the prioritization of the tasks by Council members. The prioritization and other issues are discussed below.

2. As a general comment, there are several committees who do not appear to have considered available resources when developing their recommendations. In particular, I do not believe all of the Scallop Committee recommendations can be accomplished without diverting resources from other FMPs. Three other tasks – RSA program reviews, a Council strategic plan, and a programmatic review of the Council – will also require significant staff involvement, even if some of the work is performed by a contractor.

Prioritization Exercise

3. In an effort to help the executive Committee allocate Council resources, each Council member was asked to rank each task as a high, medium, or low priority task. Fourteen of eighteen Council members replied, but some respondents did not rank every task. The ratings

were converted to a score (high=3, medium = 2, and low = 1), summed for each task, and the tasks ranked in order. The average score (31.7) and standard deviation (8.7) across all tasks was calculated. Given the standard deviation (SD), scores within a few points of each other do not reflect a difference in importance as evaluated by the Council. The SD for each task was also calculated. Lower SDs for a task could be interpreted as indicating more agreement on the task's ranking; higher SDs indicate less agreement on the task's importance. Perfect agreement would result in an SD of 0; an even distribution (4 high, 6 medium, 4 low) results in an SD of 0.78, and an even split (7 high, 7 low) results in an SD close to 1.

4. There are a few observations worth noting from this ranking exercise.
 - a. There is general agreement among Council members on the importance of the top eleven tasks. With a few exceptions, there is also general agreement on the relative importance of the bottom five or ten ranked tasks.
 - b. Tasks with the highest SD (over 0.8) include some that were ranked above average and some below average. This high SD indicates a wide divergence of opinion among Council members on the importance of these tasks. Above average tasks were the skate monitoring report (a regulatory requirement), the Cost Stock Structure Working Group, and modifying scallop fishery flatfish AMs. Below average tasks included coordination of fluke/BSB/scup management with the MAFMC, integrating findings from the Sea Scallop Survey Peer Review, and commenting on major project EFH consultations.
 - c. While Council members were asked to rank all tasks, some are not discretionary, even if ranked low.

Groundfish

5. The highest-ranked groundfish priorities are setting OFLs/ABCs for 2018 and the ASM amendment. ASM concerns will not be fully addressed by FW 55 this fall. There is little interest on the Council in pursuing party/charter limited entry, a GB cod sub-ACL for the recreational fishery, or the five-year sector review.

6. After every cod assessment, the issue of stock structure surfaces. Little formal progress has been made on it for over three years, but it appears that this year may see progress on this issue. At its October meeting, the NRCC outlined a tentative plan to address cod stock structure issues over the next year, leading to a peer review of stock structure in 2017. The Council might need to take action to address the results of the peer review in future years. However, this year Council member interest in addressing cod stock structure seems to have declined.

Monkfish

7. At its October meeting, the Monkfish Committee passed a motion suggesting that Amendment 6 be reinitiated. This task was not ranked by Council members. First started in 2010 to consider a catch share program for this fishery, the amendment was abandoned after progress stalled.

Sea Scallops

8. There is general agreement on the importance of the top four scallop tasks: specifications and management measures for 2018, modifying the access areas because of Omnibus Habitat Amendment 2 (OHA2), and NGOM management changes.

9. A related issue is that the Scallop Committee recommended only one year of specifications (with a second default year). We have fallen into the practice of adjusting scallop specifications each year even though the FMP and the regulations call for a two-year cycle. This inhibits the ability of the Committee and PDT to address other scallop management issues. It also increase uncertainty for the industry, as the annual adjustments cannot be determined until late fall. The Executive Committee may want to encourage the Council to revisit a biennial adjustment process. One idea that may be worth considering is a two-year cycle with an annual review to see if an adjustment is warranted.

10. At a recent meeting, the Scallop Committee developed a recommendation to hold a meeting to discuss the possibility of moving small scallops to areas better suited for growth and eventual harvest. Since this is a one-time event, it is not listed on this sheet, but if pursued it will require staff time to pursue.

Herring

11. The herring amendment to develop a new ABC control rule, and to address localized depletion, are the main tasks facing this committee. There was little Council interest in revising the RH/S white paper in advance of 2018.

12. At its October meeting, the Herring Committee suggested adding two tasks to the list. Neither was ranked by the Council. The first was to consider establishing a control date but the purpose of this was unclear. The second was to consider a measure that would allow GARFO to shift ACL between herring management areas during the season.

Habitat

13. Work will continue on the Deep-Sea Coral amendment and the framework that will consider surfclam vessel access to habitat management areas. Both should be completed this year. There is a need for the Council to pay closer attention to wind-power developments, a task best assigned to the Habitat Committee.

Whiting

14. Continued development of the whiting limited entry program and whiting specifications will compete for staff time with the EFBM fishery ecosystem plan. The Whiting Committee made minor modifications to what would be included in the whiting amendment and specifications packages.

Skates

15. Skate specifications and the skate limited entry program were ranked in the top half of Council tasks. At its October meeting, the Skate Committee suggested initiating an action to allow landing of barndoor skates. This task was not ranked by Council members.

EBFM

16. Work will continue on the fishery ecosystem plan.

Trawl Survey Advisory Panel

17. This AP was ranked below average by Council members.

SSC

18. This year the SSC submitted three recommendations for priorities. Two address groundfish assessments and projects, and one addresses a larger issue that often is an issue with groundfish. It may be possible to contract some of the analyses needed to support these topics but they would still place demands on PDT and Committee time to implement any changes in control rules. There is some overlap between these suggestions and the groundfish priority on catch advice stability. In addition, there is likely to be a national science meeting of the SSCs that will partially address these topics.

Grouping

19. Enclosure (1) does not group all tasks into management actions. This will be done after the Council makes its decisions, and there could be changes made to the suggestions enclosed.

Other

20. Two tasks were added by GARFO and were not ranked by Council members. The first would modify the SBRM to address the lobster trap fishing mode; GARO would take the lead on this action. The second would begin background work in preparation for development of an aquaculture FMP in 2018. GARFO would expect staff support but does not anticipate any other Council involvement this year.

Just Over The Horizon

21. While not an issue for this year's priorities, it may be helpful to note issues that may surface in the near future.

- a. Once again, the NRCC is exploring the possibility of changes to the assessment process. This could have implications on setting ABCs/ACLs in the future, and may require modifications to Council FMPs to adapt to a new system.
- b. The Marine Recreational Information Program will announce modifications to the way recreational effort is calculated in 2017. This is likely to result in revised

recreational catch estimates for all time series. This could affect stock assessments for GB cod, GOM cod, GOM haddock, GOM winter flounder, and SNE/MA winter flounder. The current plan is for updated assessments to be performed in the second half of 2018, which is later than expected last year.

Enclosures: (1) 2015 Priority Ranking
(2) 2015 Draft Priorities – Executive Director Recommendations

28-Oct-16 This worksheet identifies possible priorities or tasks for 2017. This list has not been prioritized by the Ex Comm.										Overall Average		31.7
Council ranking of tasks										St Dev		8.7
